tablets cladribine

Merck

You will have blood tests before you start treatment to check that you can take MAVENCLAD. The doctor will also do blood tests during and after treatment to check that you can continue to take MAVENCLAD, and that you are not developing any complications from the treatment.

You will be tested to see if you have any infections before you start MAVENCLAD treatment. It is important to talk to your doctor if you think you have an infection. Symptoms of infections can include: fever, aching, painful muscles, headache, generally feeling unwell or yellowing of the

eyes. Your doctor may delay treatment, or interrupt it, until the infection clears up.

If necessary, you will be vaccinated against shingles before you start treatment. You will need to wait between 4 and 6 weeks for the vaccination to take effect. Tell your doctor immediately if you get symptoms of shingles, a common complication of MAVENCLAD (see section 4), which

may need specific treatment.

Progressive multifocal leukoencephalopathy (PML) If you believe your MS is getting worse or if you notice any new symptoms, for example changes in mood or behaviour, memory lapses, speech and communication difficulties, talk to your doctor as soon as possible. These may be the symptoms of a rare brain disorder caused by infection and called progressive multifocal leukoencephalopathy (PML). PML is a serious condition that may lead to severe disability or death.

Although PML has not been observed with MAVENCLAD, as a precaution, you may have a head MRI (magnetic resonance imaging) before you start treatment.

Single events of cancer have been observed in patients who had received cladribine in clinical studies. Talk to your doctor if you have previously had cancer. Your doctor will decide the best treatment options for you. As a precautionary measure, you should follow standard cancer screening recommendations, as advised by your doctor.

MAVENCLAD may cause liver problems. Talk to your doctor before taking MAVENCLAD if you have or have ever had liver problems. Tell your doctor immediately if you develop one or more of the following symptoms: feeling sick (nausea), vomiting, stomach pain, tiredness (fatigue),

loss of appetite, yellow skin or eyes (jaundice) or dark urine. These could be symptoms of serious

Contraception Men and women must use effective contraception during MAVENCLAD treatment and for at least 6 months after the last dose. This is important because MAVENCLAD can seriously harm your baby. See also 'Pregnancy and breast-feeding'.

Blood transfusions

If you require blood transfusions, tell the doctor that you are taking MAVENCLAD. You may have to have the blood irradiated to prevent complications.

Changing treatments

If you change from other MS treatments to MAVENCLAD, your doctor will check that your blood cell counts (lymphocytes) are normal before you start treatment

If you change from MAVENCLAD to other MS treatments, talk to your doctor. There can be overlaps in the effect on your immune system.

Children and adolescents

Use of MAVENCLAD is not recommended in patients below the age of 18 years, because it has not been investigated in this age group.

Other medicines and MAVENCLAD

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other

Do not start MAVENCLAD together with medicines that weaken your immune system or reduce the

production of blood cells by your bone marrow. These include:

corticosteroids can be used when advised by your doctor

Talk to your doctor, if you are or have been treated with:

Your doctor may need to supervise you more closely.

methotrexate (used to treat conditions such as psoriasis or rheumatoid arthritis);

long-term corticosteroids (used to reduce inflammation, for example in asthma). Short-term

Do not use MAVENCLAD together with other medicines for MS unless specifically advised by your doctor.

Such medicines include alemtuzumab, daclizumab, dimethyl fumarate, fingolimod, glatiramer acetate,

Do not take MAVENCLAD at the same time as any other medicine. Leave a gap of at least 3 hours

medicines which may affect your blood cells (for example carbamazepine, used to treat epilepsy).

certain types of vaccines (live and live attenuated vaccines). If you have been vaccinated within the last 4 to 6 weeks, MAVENCLAD therapy must be delayed. You must not receive such vaccines during MAVENCLAD treatment. Your immune system must have recovered before you can be vaccinated, and

week you will be starting.

Table 2

Take the tablet(s) at about the same time each day. Swallow them without chewing. You do not have to take the tablets at meal times. You can take them with meals or between

Read the 'Step-by-Step Guide' at the end of this package leaflet on how to handle the child- resistant package and how to take the tablets included in the pack.

- Ensure your hands are dry before picking up your tablet(s).
- Push your tablet(s) through the blister and swallow immediately.
- Do not leave your tablet(s) exposed on surfaces, for example on a table, or handle the tablet longer than necessary.
- If a tablet is left on a surface or if it breaks and fragments fall from the blister, the
- area must be thoroughly washed.
- Thoroughly wash your hands after handling the tablets.
- If you lose a tablet, contact your doctor for advice.

Duration of a treatment week

Depending on the total number of tablets you have been prescribed, you have to take them over 4 or 5 days, in each treatment week.

Table 3 shows how many tablets (1 or 2 tablets) you have to take on each day. If your daily dose is 2 tablets, take them at the same time.

Example: if you have to take 8 tablets, you would take 2 tablets on Day 1, Day 2, Day 3, then 1 tablet on Day 4 and Day 5.

Table 3 Total number of tablets

1 or 2 tablets daily for

4 or 5 days, mid April

1 or 2 tablets daily for

4 or 5 days, mid May

| per treatment week | Day 1 | Day 2 | Day 3 | Day 4 | Day 5 |

| 10 | 2 | 2 | 2 | 2 | 2 |

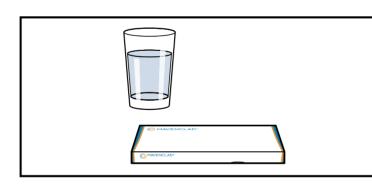

If you take more MAVENCLAD than you should

If you have taken more tablets than you should, contact your doctor immediately. Your doctor will decide if you need to stop treatment or not.

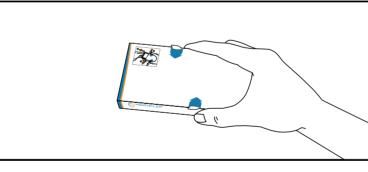

There is limited experience with overdose of MAVENCLAD. It is known that the more medicine you take the less lymphocytes may be present in your body, resulting in lymphopenia (see section 4).

A Step-by-Step Guide to taking your MAVENCLAD 10 mg tablets

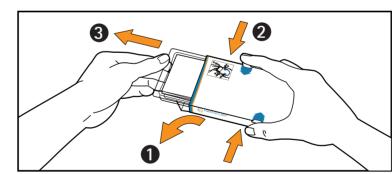

MAVENCLAD is packed in a reclosable, child-resistant carton and must be kept out of the sight and reach of children. See below for a step-by-step guide on how to handle the package and to take the MAVENCLAD tablets. Make sure you know how many tablets are contained in the package. See package leaflet for guidance.

1 Have a glass of water ready and make sure your hands are clean and dry before taking the tablet(s).

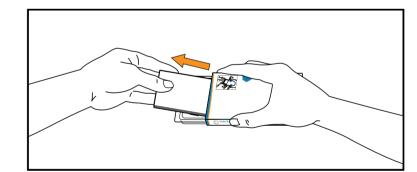

Pick up carton with the opening instructions facing up.

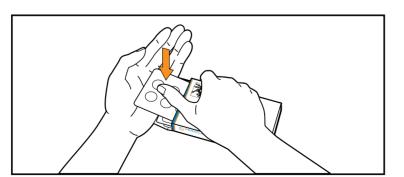

(1) Open the flap on the left end.

(2) Push in the hooks on the sides of the carton simultaneously with your index finger and thumb, and keep hooks pushed.

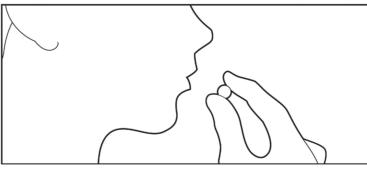

(3) Pull the tray out until it stops. Caution: Do not remove the tray from the carton.

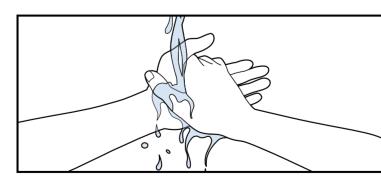

Take the leaflet from the tray. Make sure you have read all of the package leaflet including the step-by-step guide and keep it in a safe place.

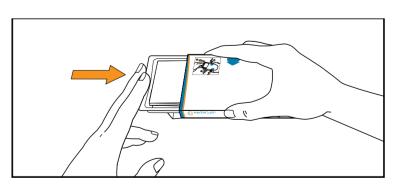

5. Raise the blister pack by pushing your finger through the hole in the tray. Place your hand under the blister pack and push 1 or 2 tablet(s) into your hand, according to your prescribed dose.

6 Swallow tablet(s) with water. Tablets must be swallowed whole and not chewed or allowed to dissolve in your mouth. Contact with skin should be limited. Avoid touching your nose, eyes, and other parts of the body.

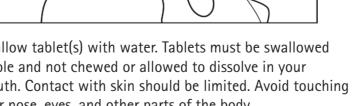

Wash your hands thoroughly with soap and water.

8. Push the tray back into the carton. Store in the original package in order to protect from moisture.

Keep your tablets in the blister until your next dose. Do not pop the tablets out of the blister. Do not store the tablets in a different container.

by 1 day. If you miss 2 consecutive doses (for example both Day 3 and Day 4 doses), take the missed doses for the next 2 days, and then extend the treatment week by 2 days. If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets

Some side effects could be or could become serious Lymphopenia and shingles

The most important side effect is a reduction in the number of white blood cells called lymphocytes (lymphopenia), which is very common (may affect more than 1 in 10 people) and may be severe. Lymphopenia may increase the risk of getting an infection. An

infection commonly seen with MAVENCLAD is shingles. Tell your doctor immediately if you have symptoms of shingles such as a 'band' of severe pain and blistering rash, typically on one side of the upper body or the face. Other symptoms may be headache, burning, tingling, numbness or itchiness of the skin in the

affected area, feeling generally unwell or feverish in the early stages of infection. Shingles will need to be treated, and MAVENCLAD treatment may need to be stopped until the infection is cleared.

Liver problems (uncommon - may affect up to 1 in 100 people)

Tell your doctor immediately if you have symptoms such as feeling sick (nausea), vomiting, stomach pain, tiredness (fatigue), loss of appetite, yellow skin or eyes (jaundice) or dark urine. MAVENCLAD treatment may need to be stopped or interrupted.

Other possible side effects

Common side effects - may affect up to 1 in 10 people

- cold sore (oral herpes) - rash
- hair loss
- reduction in the number of certain white blood cells (neutrophils)
- allergic reactions, including itching, hives, rash and swelling of the lips, tongue or face

Very rare side effect - may affect up to 1 in 10,000 people

- tuberculosis

Reporting of side effects

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store MAVENCLAD

Keep this medicine out of the sight and reach of children.

Do not use this medicine after the expiry date which is stated on the label and the carton after EXP. The expiry date refers to the last day of that month.

Store in the original package in order to protect from moisture.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.

6. Contents of the pack and other information What MAVENCLAD contains

- The active substance is cladribine. Each tablet contains 10 mg cladribine.

- The other ingredients are hydroxypropylbetadex, sorbitol and magnesium stearate.

What MAVENCLAD looks like and contents of the pack

MAVENCLAD tablets are white, round, biconvex tablets engraved with 'C' on one side and '10' on the other side. Each pack contains 1, 4, 5, 6, 7 or 8 tablets in a blister, sealed in a cardboard wallet and fixed in a child-resistant carton.

Not all pack sizes may be marketed.
